

## DATA SHEET

# Multi-Level Scan-Pack

Automate your packing process while limiting costly errors by capturing accurate data, creating the right paperwork, and consistently packing your shipment.

Pacejet's Multi-Level Scan-Pack module gives our users the ability to capture data, print the right labels and paperwork, and issue SSCC identification in an easy and efficient way. Our feature is built to help users avoid costly errors and provide accurate shipping information for both the shipper and the customer.

## Key Advantages of the Multi-Level Scan-Pack Module:

- **Reduce errors** by validating the items in each order
- **Automatically capture** mixed types of item packaging
- **Speed up the entire process** with print-as-you-pack labeling
- **Easy-to-print** retailer-compliant shipping
- **Automate printing** of complex paperwork and ASN EDI
- **Simplify compliance** with many trading partners
- **Automatically capture** serial numbers while packing

When packers utilize our module, they can scan loose and boxed items as pallets are being filled and staged for shipping. Once the packing process is complete, shippers can rate-shop for a carrier and stage those shipments for pickup, all within one streamlined solution.

## Business benefits

### Improve packing efficiency and accuracy

Use scanners to easily pack your shipment with fewer clicks and less manual entry

### Capture data as you go

As you pack your shipment, information flows and paperwork is automatically generated

### Comply with trading partners regulations

Pacejet automates compliance with your active trading partners to reduce the potential of errors and extra surcharges.

### Complete paperwork generated for a complete shipment

All the paperwork, shipping labels, and SSCC identification are generated automatically, saving you time and effort on your shipping line
